PROFESSIONAL SUMMARY

Business Analyst with 2+ years of experience managing requirements and dashboard/reporting needs for supply chain, procurement, and logistics systems — from stakeholder discussions and gap analysis through BRD/FRD documentation, data consolidation, and UAT. Worked directly with commodity managers, buyers, supply planning teams, logistics coordinators, product owners, and engineering/IT teams to translate business problems into validated requirements and visual reporting tools consuming SAP and ERP data. Intermediate hands-on experience building dashboards in Power BI and Tableau, with Power Query for data transformation, and basic SQL and VBA skills to support data-driven reporting. Comfortable acting as a bridge between business stakeholders and technical teams to ensure accurate data transfer and system alignment. Delivered 6+ products from requirement to live deployment across procurement automation, freight intelligence, supply visibility, and SaaS platform domains.

CORE COMPETENCIES

Business Analysis: Requirement Gathering, BRD/FRD Preparation, Gap Analysis (As-Is/To-Be), User Stories, Process Analysis, UAT Coordination, Defect Tracking, Stakeholder Management, Agile/Scrum, Systems Analysis & Requirements Management

Data & Reporting: Tableau, Power BI (intermediate — dashboard creation, DAX basics), Power Query (data transformation, cleansing), SQL (basics), Advanced Excel, SAP Data Consumption (Item Master, Open PO, On-Hand Inventory, Demand), Data Cleansing & Transformation, Dashboard Requirements & Design, Data Quality Audits & Data Governance

Supply Chain & Logistics Domain: RFQ Management, Freight Sourcing & Comparison, Procurement Process Analysis, Supply & Demand Planning, Supplier OTD & Risk Analysis/Scoring Models, Inventory Management, Shortage & Buildability Analysis, Inbound/Outbound Logistics Tracking, eProcurement

Tools: Python, VBA (intermediate), API Integration, JIRA, Lucidchart, Zoho Sprints, Cross-Functional IT Coordination

PROFESSIONAL EXPERIENCE

Business Analyst | InESS Global Solutions, Chennai | 2024 – Present

- Led requirement-gathering discussions with commodity managers, buyers, logistics coordinators, product owners, and supply planning stakeholders to understand existing workflows, documenting findings as BRDs/FRDs and user stories for the development team.
- Performed gap analysis comparing existing manual procurement, freight, and supply chain workflows against proposed system designs, identifying pain points and documenting target-state requirements across multiple live products.
- Defined dashboard and reporting requirements into buyer-facing and leadership-facing views, reducing manual spreadsheet cross-referencing.
- Designed and maintained a scoring-based supplier risk dashboard mapping key parameters (QBR %, Disaster Risk, Geo-Political Risk, Lead Time Trend) across automated and manual data inputs to support commodity manager decision-making.
- Performed regular data quality audits on supplier and procurement datasets, identifying scoring/logic inconsistencies and working with data owners to correct and standardize inputs.
- Acted as a liaison between business stakeholders and engineering/IT teams to validate data mapping and ensure successful data transfer across systems.
- Monitored post-launch issues and change requests raised by users, collaborating with stakeholders and developers to prioritise and resolve them.
- Coordinated UAT with end users across multiple product launches, tracking defects, aligning with engineering on fixes, and confirming requirements were met before go-live.

Career Break | Family Caregiving Responsibility | 2019 – 2023

- Managed family caregiving responsibilities. Concurrently built foundational analytical and technical skills (Python, data fundamentals) in preparation for re-entry.

Junior Associate — QA & Testing | Amazon, Chennai | 2019

- Executed end-to-end functional and UI testing for the Amazon Audible platform across web and mobile surfaces, covering regression, smoke, and exploratory test cycles.

- Identified and documented defects against product requirements
- Built a reusable test case library based on product requirements,

KEY PROJECTS

Supply-Demand Visibility & Shortage Analysis Tool — InESS Solutions (SaaS)

Stakeholders: Managers and supply chain experts at InESS.

- Gathered requirements through stakeholder discussions; conducted gap analysis on existing manual processes where teams were cross-referencing 6+ spreadsheets and SAP exports to answer basic buildability questions.
- Documented requirements into a BRD covering consolidation of SAP data sources (Item Master, Open PO, On-Hand Inventory, Demand) and BOM data into a single component-level view.
- Defined functional requirements for a shortage and buildability engine flagging non-buildable Sales Orders by week, alongside Buyer Action, Supplier OTD, and Inventory Value dashboards.
- Used Power Query to connect, clean, and transform raw SAP exports and spreadsheet data before loading into Power BI dashboards, reducing manual data prep time.
- Built out Buyer Action and Inventory Value dashboards in Power BI, using SQL queries to pull and validate data against SAP source extracts.
- Collaborated closely with IT/engineering teams to validate SAP data extraction logic and ensure dashboard accuracy against source systems.
- Coordinated UAT with buyer and planning stakeholders before go-live.
- **Outcome:** Consolidated 6+ data sources into one view, eliminating manual spreadsheet cross-referencing for buyers.

Supplier Continuity & Risk Scoring Tool — Arista Networks (client engagement)

Stakeholders: Commodity managers, procurement leads, supply planning teams.

- Built a scoring-based supplier risk assessment framework, mapping parameters including QBR %, Disaster Risk, Geo-Political Risk, and Lead Time Trend to automated and manual data sources.
- Analyzed data sourcing requirements to determine which risk parameters could be automated vs. manually tracked, improving reporting accuracy and reducing manual audit time.
- Built and maintained the tool's scoring dashboard using Power BI, visualizing supplier risk parameters for commodity manager review.
- Used VBA macros in Excel to automate recurring scoring calculations and reduce manual data entry before Power BI refresh.

FreightPilot — Logistics & Freight Intelligence Platform — InESS Solutions (SaaS)

Stakeholders: Internal procurement team, logistics coordinators, freight forwarder network, and engineering team.

- Conducted process analysis on the existing freight sourcing workflow; gap analysis revealed that part numbers, packaging data, and supplier quotes were scattered across PDFs, spreadsheets, and emails with no single source of truth — causing slow RFQ turnaround and inconsistent freight decisions.
- Documented requirements and designed workflows for RFQ creation, a supplier quote comparison engine (covering ocean/air rates, guaranteed capacity, and customs brokerage costs), and a real-time inbound/outbound Logistics Tracker.
- Gathered requirements from leadership to design a Procurement Dashboard covering shipment volume by forwarder, country, and mode, plus quarter-on-quarter freight trends.
- Built the Procurement Dashboard in Power BI, writing SQL queries against consolidated freight data to support shipment volume and trend visualizations.
- **Outcome:** Replaced manual, spreadsheet-driven freight comparisons with a self-serve platform module, reducing quote turnaround time.

SaaS Platform — Centralised Tool Access & Subscription System — InESS Solutions

Stakeholders: Product owner, procurement and logistics end users, admin users, engineering team.

- Identified a core business gap — tools like ProcurePilot and FreightPilot were being built in isolation with no common platform — and led requirement-gathering sessions to define full platform scope.
- Defined requirements for the admin layer covering user management, plan limits, subscription tracking, and usage reporting.
- **Outcome:** Delivered a scalable foundation platform acting as the single commercial and access layer for all current and future tools.

SaaS RFQ Management Platform — InESS Solutions (SaaS)

Stakeholders: Suppliers, commodity managers, distributors, and finance teams.

Designed and documented requirements for an AI-powered RFQ Agent — built using LangGraph, a framework for orchestrating multi-step AI agent workflows — that understands natural-language requests and takes direct action within the platform, such as raising new RFQs, checking status, and submitting quotes on a user's behalf, reducing manual portal navigation for suppliers and buyers.

Defined the agent's decision logic and tool-calling flow to plug into the platform's core workflow engine, covering supplier onboarding, role-based dashboards (Admin, Supplier, Buyer), and the RFQ approval pipeline the agent operates on.

Documented supporting requirements for automated cost comparison, BOM analysis, and multi-source split suggestions, along with business-split and cost-up reporting for GSM managers.

Outcome: Projected 50% reduction in approval cycle time; eliminated duplicate submissions and improved supplier quote tracking; UAT completed with major issues resolved before release.

Spares Automation Tool — Arista Networks (client engagement)

Stakeholders: Commodity managers and procurement leads at Arista Networks.

- Conducted requirement-gathering sessions with procurement stakeholders to understand existing manual spares sourcing and RFQ processes; performed gap analysis identifying that validation, approval, and quote comparison steps were handled manually across three separate procurement modules with no standardised rules.
- Documented functional requirements and validation logic for each module into a BRD/FRD, covering rule-based processing, exception handling, and approval workflows for engineering handoff.
- Coordinated UAT with procurement end users across all three modules, tracked defects, aligned with engineering on fixes, and signed off before go-live.
- **Outcome:** 30% reduction in turnaround time, zero manual processing errors since go-live — replaced a fragmented, error-prone manual process with a fully automated, rules-driven system.

Live Tool Maintenance & Continuous Improvement — Arista Networks

- Support live tools post-launch — logging and following up on change requests, refining business rules based on user feedback, and assisting commodity managers with quote analysis.
- Conduct tariff analysis to support commodity managers in evaluating sourcing decisions. Review and verify claim documentation submitted by Contract Manufacturers, approving submissions where requirements are met and escalating discrepancies for resolution.

EDUCATION

B.E. in Mechatronics Engineering — SNS College of Technology, Coimbatore (2017)

CERTIFICATIONS

- Prompt Engineering — Coursera / Vanderbilt University (2025)
- Python Programming with AI — DeepLearning.AI (2025)
- AI For Everyone — Coursera (2025)
